

**Disciplina:  
Internet das Coisas  
(TECS1)**

Prof. Hermano Pereira

**TSI – UTFPR - GP**

# **Hardware na Internet das Coisas**

## Border Router

Raspberry Pi

Radio 802.15.4

## Sensor Node

Radio 802.15.4

Wasp mote

Gas Sensors

# Arquitetura - Mote

## Unidade de Processamento/Memória

- Memória  
(programa, dados)
- Microcontrolador
- Conversor An. Dig.
- CPU  
(sistemas embarcados)

Consumir pouca energia e ocupar pouco espaço

## Unidade de Comunicação

- Sem fio (rádio)
- Cabeado

Ocorrem perdas,  
curto alcance,  
baixa potência.

## Fonte de Energia

- Bateria (recarregável)
- Energia elétrica
- Colheita de Energia (harvesting)

Capacidade de hibernar.

## Unidade de Sensores/Atuadores

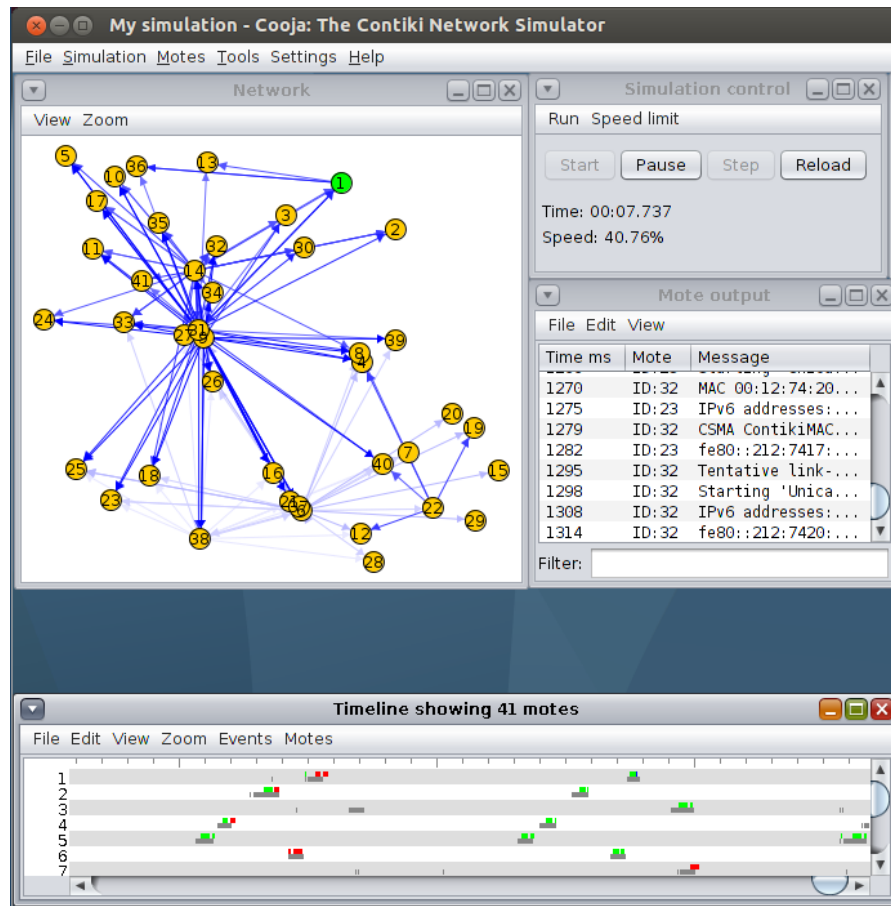

- Monitoramento ambiente
- Grandezas físicas (temperatura, umidade, pressão, presença ...)
- Atuadores (movimento, comandos, VOZ, ...)

Obtém-se dados,  
Informações.

# Motes + Simulação

**COOJA = Contiki OS Java**

## Tmote Sky

## MicaZ

## Zolertia Z1

Hardware	MicaZ	Tmote Sky	Z1
RAM	4K	10K	8K
Flash	128K	48K	92K
LPM	16MHz	8MHz	16MHz
Bandwidth	250Kbps	250Kbps	250Kbps

# Vamos trabalhar?

## ***Internet das Coisas: da Teoria à Prática.***
